the authors study the sample path regularity of the solution of a stochastic wave equation in spatial dimension  $d \geq 3$  the driving noise is white in time and with a spatially homogeneous covariance defined as a product of a Riesz kernel and a smooth function the authors prove that at any fixed time  $t$  the sample paths in the spatial variable belong to certain fractional Sobolev spaces in addition for any fixed  $x \in \mathbb{R}^3$  the sample paths in time are Hölder continuous functions further the authors obtain joint Hölder continuity in the time and space variables their results rely on a detailed analysis of properties of the stochastic integral used in the rigorous formulation of the SDE as introduced by Dalang and Mueller 2003 sharp results on one and two dimensional space and time increments of generalized Riesz potentials are a crucial ingredient in the analysis of the problem for spatial covariances given by Riesz kernels the authors show that the Hölder exponents that they obtain are optimal

model predictive control MPC refers to a class of control algorithms in which a dynamic process model is used to predict and optimize process performance from lower request of modeling accuracy and robustness to complicated process plants MPC has been widely accepted in many practical fields as the guide for researchers and engineers all over the world concerned with the latest developments of MPC the purpose of advanced model predictive control is to show the readers the recent achievements in this area the first part of this exciting book will help you comprehend the frontiers in theoretical research of MPC such as fast MPC nonlinear MPC distributed MPC multi dimensional MPC and fuzzy neural MPC in the second part several excellent applications of MPC in modern industry are proposed and efficient commercial software for MPC is introduced because of its special industrial origin we believe that MPC will remain energetic in the future
